WHAT IS CLAIMED IS:

- An active low-pass filter system including:
- a low-pass filter circuit including a resistive forward signal flow branch; and
- an isolated-integrator band-reject filter coupled to the low-pass filter circuit forward signal flow branch.
- The system of Claim 1, wherein the band-reject filter includes a resistor for tuning the band-reject filter.
- The system of Claim 1, wherein the low-pass filter circuit is a Sallen & Key filter.
- The system of Claim 1, wherein the low-pass filter circuit is a multiple feedback filter.
- The system of Claim 1, wherein the low-pass filter circuit is a state variable
 - A power amplifier system for driving a load comprising:
 - a pulse width modulation circuit creating ripple spectra;
- a feedback control loop coupled to said pulse width modulation circuit and including an active low-pass filter, said low-pass filter including a feedback demodulation filter and an isolated-integrator frequency-rejecting network.
- The system of Claim 6, wherein the frequency-rejecting network is an isolated-integrator band-reject filter, including a resistor for tuning the band-reject filter.
- 8. The system of Claim 6, further including an error amplifier and modulator circuit connected to an input of the pulse width modulation circuit, and a demodulation filter connected between the pulse width modulation circuit and the load.
